Site is a low, wide, curved circular structure on supports (see sketches page 4). It is isolated with nothing near it. The structure is metallic and thick-walled. Inside there are narrow hallways and lots of pipes. Lighting is low and emits from flat, recessed lights. The concept "safety" is associated with the structure's function/purpose. It's mission is "deep travel" with the word "deep" referring to either extreme depth or extreme height, because of the similarities in pressure I couldn't tell the difference. The mission is also very "subtle".

The path from its original location to the its location when viewed is shown on page 8. The original location is quite distant from the viewing location.
